Installation

Requirements

- WordPress 6.7 or newer
- PHP 8.2 or newer
- A current evergreen browser for the interactive components

Backend installation

1. Go to **Plugins** → **Add New** in WordPress.
2. Search for **Lewe Bootstrap Visuals**.
3. Click **Install Now**, then **Activate**.

Manual installation

1. Download the plugin ZIP from the WordPress listing (https://wordpress.org/plugins/shortcode-bootstrap-visuals/) or from your release package.
2. Go to **Plugins** → **Add New** → **Upload Plugin** and select the ZIP.
3. Click **Install Now**, then **Activate**.

If you upload the ZIP over an existing 3.0.1 installation, WordPress offers **Replace current with uploaded** when the installed plugin folder is `shortcode-bootstrap-visuals`. Existing pages do not need to be edited.

Upgrading from 3.x

See Upgrading from 3.x. The shortcode tags and attributes are preserved, the old `lewe_bsv_options` row is removed automatically on the first admin request after the upgrade, and no content migration is required.

After activation

The plugin has no settings. Open **Settings** → **Bootstrap Visuals** for the version, shortcode summary, documentation and support links.
