Introduction

Lewe Bootstrap Visuals for WordPress adds Bootstrap 5.3 visual components to WordPress through shortcodes and a Gutenberg block. It is a styling plugin: the components use the official Bootstrap 5.3 markup and a curated Bootstrap CSS subset, compiled with the `bsv-` prefix so it does not collide with themes or other plugins.

The plugin ships a small vanilla JavaScript bundle for the interactive components (modal, collapse, accordion, alert dismissal, tooltip and popover). It does **not** load Bootstrap's JavaScript, Popper or jQuery.

Version 4.0.0 requires **WordPress 6.7+** and **PHP 8.2+**.

Shortcodes and blocks

All 25 components are available as shortcodes. The same components are exposed through the **Bootstrap Visuals** block in the block editor, with a curated attribute subset; the shortcode attribute set remains complete.

Start with the shortcode reference, or read Installation first.

Support

Support requests go to https://desk.lewe.com (https://desk.lewe.com). The plugin's About page under **Settings** → **Bootstrap Visuals** links to the same destination.

Credits

Credits go to the teams at WordPress (https://wordpress.org/) and Bootstrap (https://getbootstrap.com/) for providing such excellent software for free.
