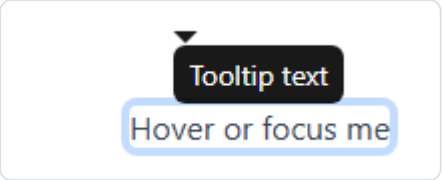
Tooltip

Adds a small tooltip to a piece of text. The shortcode content is the trigger.



Tooltip example

Example

```
[bsv-tooltip title="More information" placement="top"]Hover or focus me[/bsv-tooltip]
```

Format

```
[bsv-tooltip parameter="value" ...]trigger text[/bsv-tooltip]
```

Parameters

Parameter	Description	Default
`title`	Tooltip text. When empty, no tooltip is created.	*empty*
`placement`	`top`, `right`, `bottom` or `left`.	`top`

The trigger is focusable and receives `tabindex="0"` and `aria-describedby` while the tooltip is open. The tooltip has `role="tooltip"`; Escape closes it. Without JavaScript the trigger text remains readable.
