Column

A grid column. Columns must be placed inside a `[bsv-row]`, usually inside a `[bsv-container]`.

Grid columns example

Example

```
[bsv-container]
[bsv-row]
[bsv-column size="12" md="6"]Left[/bsv-column]
[bsv-column size="12" md="6"]Right[/bsv-column]
[/bsv-row]
[/bsv-container]
```

Format

```
[bsv-column parameter="value" ...]your content here[/bsv-column]
```

Parameters

Parameter	Description	Default
`size`	Base column span from `1` to `12`. Leave empty for an auto-width `bsv-col`.	`12`
`sm`	Span from `1` to `12` at the `sm` breakpoint.	*empty*
`md`	Span from `1` to `12` at the `md` breakpoint.	*empty*
`lg`	Span from `1` to `12` at the `lg` breakpoint.	*empty*
`xl`	Span from `1` to `12` at the `xl` breakpoint.	*empty*
`xxl`	Span from `1` to `12` at the `xxl` breakpoint.	*empty*
`offset`	Offset from `0` to `11`.	*empty*
`class`	Extra CSS classes, space-separated.	*empty*

Invalid spans are ignored; an invalid base span falls back to `12`.
