Administration

The **Administration** section of the sidebar is only visible to users who hold the corresponding permissions. By default these belong to the role *Administrator*.

The pages are grouped in two areas:

- System: users, roles, groups, permissions and the system settings
- Issues: the lists that structure issues: issue types, products, status, status categories, resolutions and tags

In addition, Housekeeping describes the automatic cleanup that runs in the background.

How the list pages work

All list pages work alike:

- Click a row's checkbox to select it. **Edit** opens the selected record, **Delete** removes the selected records after a confirmation.
- **Add** (where available) opens an empty form.
- Use **Search** to filter the table, **Show entries** to set the page size and the column headers to sort.
