Languages (classic concept)

Classic Structure

TeamCal Neo comes with two languages, English and German. In the classic structure, the language terms are saved in four files per language in the `languages` folder:

File	Content
[language].php	Strings related to the application framework
[language].app.php	Strings related to the calendar application
[language].gdpr.php	Strings related to the GDPR page
[language].log.php	Strings related to the system log

If you want to create your custom language, copy those four files and replace the [language] part with your language name. TeamCal Neo will automatically scan them and allow to switch to them. Of course, you need to translate all the srtings in those files too.
